NCL Spring 2026 Team Game Scouting Report

Dear eric torzuoli (Team "SANS.edu - "The Log Hunters""),

Thank you for participating in the National Cyber League (NCL) Spring 2026 Season! Our goal is to prepare the next generation of cybersecurity professionals, and your participation is helping achieve that goal.

The NCL was founded in May 2011 to provide an ongoing virtual training ground for collegiate students to develop, practice, and validate their cybersecurity skills in preparation for further learning, industry certifications, and career readiness. The NCL scenario-based challenges were designed around performance-based exam objectives of CompTIA certifications and are aligned to the National Initiative for Cybersecurity Education (NICE) Cybersecurity Workforce Framework published by the National Institute of Standards and Technology (NIST).

As you look to a future career in cybersecurity, we hope you find this report to be valuable in both validating skills and identifying areas for improvement across the nine NCL skills categories. You can use this NCL Scouting Report to:

- Validate your skills to employers in any job application or professional portfolio;
- Show case your achievements and strengths by including the Score Card view of your performance as part of your résumé or simply sharing the validation link so that others may view the detailed version of this report.

The NCL Spring 2026 Season had 7,520 students/players and 583 faculty/coaches from more than 440 two- and four-year schools & 220 high schools across all 50 U.S. states registered to play. The Individual Game Capture the Flag (CTF) event took place from April 10 through April 12. The Team Game CTF event took place from April 24 through April 26. The games were conducted in real-time for students across the country.

NCL is powered by Cyber Skyline's cloud-based skills evaluation platform. Cyber Skyline hosted the scenario-driven cybersecurity challenges for players to compete and track their progress in real-time.

To validate this report, please access: cyberskyline.com/report/LNH60RKEAPR4

Congratulations for your participation in the NCL Spring 2026 Team Game! We hope you will continue to develop your knowledge and skills and make meaningful contributions as part of the Information Security workforce!

Dr. David Zeichick
NCL Commissioner

NCL Spring 2026 Team Game

The NCL Team Game is designed for student players nationwide to compete in realtime in the categories listed below. The Team Game promotes camaraderie and evaluates the collective technical cybersecurity skills of the team members.

Note: Survey module (100 points) was excluded from this report.

Cryptography Module

Identify techniques used to encrypt or obfuscate messages and leverage tools to extract the plaintext.

276 TH PLACE
OUT OF 3634
NATIONAL RANK

PERFORMANCE SCORE

93rd National
Percentile

Average: 165.2 Points

Average: 57.2%

Average: 56.1%

Paper Chase (Easy)

30 POINTS
OUT OF 30

66.7%
ACCURACY

COMPLETION: 100.0%

Manually extract a flag from an image of a punch card.

Hex password (Easy)

56 POINTS
OUT OF 60

80.0%
ACCURACY

COMPLETION: 100.0%

Recover a password that has been XOR-encrypted and encoded in UTF-16.

Decoding (Easy)

60 POINTS
OUT OF 60

100.0%
ACCURACY

COMPLETION: 100.0%

Identify and decrypt different cipher schemes.

Unc's Encryption (Medium)

100 POINTS
OUT OF 100

60.0%
ACCURACY

COMPLETION: 100.0%

Exploit poor implementation of ECDSA signatures through r value reuse.

Collisions (Medium)

50 POINTS
OUT OF 50

100.0%
ACCURACY

COMPLETION: 100.0%

Forge a message that produces a truncated SHA1 hash collision.

Checkpoint (Hard)

-45 POINTS
OUT OF 60

0.0%
ACCURACY

COMPLETION: 0.0%

Flip bits in AES-CBC ciphertext to forge a trusted session token.

Enumeration & Exploitation Module

Identify actionable exploits and vulnerabilities and use them to bypass the security measures in code and compiled binaries.

ID Me (Easy)

40 POINTS
OUT OF 40

50.0%
ACCURACY

COMPLETION: **100.0%**

Identify MD5, SHA256, bcrypt, and JWT strings.

Bitcoin Hashes (Easy)

45 POINTS
OUT OF 45

100.0%
ACCURACY

COMPLETION: **100.0%**

Generate random strings and hash them until the output contains the requested characters.

Lightly Seasoned (Easy)

40 POINTS
OUT OF 40

100.0%
ACCURACY

COMPLETION: **100.0%**

Use a known plaintext attack to extract a user's password from a database of hashed passwords.

2-Ways (Medium)

40 POINTS
OUT OF 50

50.0%
ACCURACY

COMPLETION: **100.0%**

Crack wireless passwords from packet captures using aircrack-ng and hashcat.

l33t p45\$vv0rclz (Medium)

100 POINTS
OUT OF 100

80.0%
ACCURACY

COMPLETION: **100.0%**

Perform a wordlist attack by generating possible candidates from known behaviors.

Unlocking 2 (Hard)

80 POINTS
OUT OF 80

66.7%
ACCURACY

COMPLETION: **100.0%**

Generate BitLocker recovery key wordlists, crack the key, and decrypt the drive.

Scanning & Reconnaissance Module

Identify and use the proper tools to gain intelligence about a target including its services and potential vulnerabilities.

150 TH PLACE
